

Engineering and Fabrication Services

**PROCESS EQUIPMENT
& CONTROLS**

Product prototyping, custom fabrication, or affordable machined parts — PEC has the experienced team to create what you need, with the exceptional quality you expect.

Expert design and build
Top-quality materials
General and custom work

Designed to perform at the highest level...

PEC provides the design and engineering support, and senior machinists to collaborate with clients on prototyping and precision fabrication of industrial and process equipment and parts. Our experts create your vision in PEC's 30,000 square-foot machine shop equipped for customization of piping, sheet metal, stainless and carbon steel, and more.

and built to last.

We have a reputation for attracting the best-of-the-best in the industry. We find and develop potential team members who have extraordinary talent, technical skills, and character. We also make sure they are eager to apply everything they know toward everything they do... including making our clients successful.

It's that level of commitment that makes our products and services second-to-none, and solidifies our reputation as the best in the business.

The PEC-plus:

- Rigorous quality control standards and processes
- FDA food grade equipment and piping
- Steel group specific production workflows
- Precision parts produced to exacting specifications

Better performance. That's what differentiates PEC.

Our exceptional level of performance is not achieved by having *more* people, but rather having the *right* people. The PEC team consists of seasoned professionals with experience in the industries we serve, and committed to delivering process equipment that out-lasts and out-performs solutions from any competitor.

Because we focus on customer success, we closely manage every aspect of your project to optimize the process and product. This is how we consistently deliver peak ROI for every client.

Better performance and a better experience is our goal. Always has been, always will be.

Applications:

- Custom proprietary equipment
- Square-to-round sheet metal conversion
- Specialty metal welding
- Process piping, steam and water piping
- Precision parts production

The PEC-plus:

- AWS certified welders
- CNC machinists and technicians
- Master electricians
- Mechanical and manufacturing experts

Expertise, versatility, and
an unyielding commitment
to your success.
